iPhone Development: Exploring New Paradigms and new ways of having the rug pulled out from under you

Prof. Paul Dickson
Dept. Computer Science
Hampshire College

Tuesday Nov 2, 2010, 5:00 p.m.
Ford Hall 240

iPhone development is cool. Hip, and extremely frustrating. This talk explores the experience of developing for the iPhone/iTouch. We’ll discuss how the interface drives development and how the device defines what development can be done. We’ll also explore the advantages and disadvantages of developing for a closed system in which Apple has final say on all applications. The good, the bad, the ugly, and the irritating will all be on display.

Refreshments served at 4:50 p.m.
