UNIX Course Account Form for 112b

Department of Computer Science, Smith College, Northampton, Massachusetts 01063

Here is your Computer Science UNIX account. Your account name is: 112b

Your password is: obQ’t61A

Read the material on “System Practices,” sign the agreement below, tear it off along the dotted line, and return it to your instructor.

System Practices

Smith instructional computer systems are meant to be used for any and every educational purpose. There are no fixed limits on or charges for login time, use of the CPU (processor), or file storage space. Since some resources can be used up—printer paper, or access to terminals—we ask that you use these only as necessary. Help keep the systems unregulated—*don’t waste or monopolize resources*. When file storage space runs out, pitch in to help make space available. Similarly, use your good judgement to minimize use of CPU-intensive programs when the system is heavily loaded. Use the system as much as you need to, but *let other people work too*.

Beowulf, grendel, and the other Computer Science machines are run as an open system. The UNIX philosophy is to leave as much of the computer open for inspection as possible. One of the best ways to learn what’s available is to explore. Secrecy is not the standard on UNIX. However, while system files are public, other people’s files are not. *Respect the privacy of other users*.

This account is for your use *only*; it may not be given away or shared.

Getting Started

After you first log on, you might want to change your given, random password; and you might want to update your “finger”information. Be forewarned that **passwd** will check for and reject easily cracked passwords.

To change your password, type:	passwd
To change your “finger” information, type:	chfn
To logout, type:	logout

A few other Unix commands:

To check your finger information, type:	finger 112b
To see manual page for ***command*****, type:**	man *command*
To list commands related to ***keyword*****, type:**	man -k *keyword*
To list a text file, type:	more
To read mail, type:	pine
To read news, type:	tin

Other commands (use man **to learn more):** ls, chmod, finger, w, mkdir, cd, mv, emacs, vi

....

Return this portion to your instructor.

Account name: 112b

In accepting this account, I agree to follow the system practices outlined above.

UNIX Course Account Form for 112b

Department of Computer Science, Smith College, Northampton, Massachusetts 01063

Here is your Computer Science UNIX account. Your account name is: 112b-ak

Your password is: p6Iw0Ja!

Read the material on "System Practices," sign the agreement below, tear it off along the dotted line, and return it to your instructor.

System Practices

Smith instructional computer systems are meant to be used for any and every educational purpose. There are no fixed limits on or charges for login time, use of the CPU (processor), or file storage space. Since some resources can be used up—printer paper, or access to terminals—we ask that you use these only as necessary. Help keep the systems unregulated—*don't waste or monopolize resources*. When file storage space runs out, pitch in to help make space available. Similarly, use your good judgement to minimize use of CPU-intensive programs when the system is heavily loaded. Use the system as much as you need to, but *let other people work too*.

Beowulf, grendel, and the other Computer Science machines are run as an open system. The UNIX philosophy is to leave as much of the computer open for inspection as possible. One of the best ways to learn what's available is to explore. Secrecy is not the standard on UNIX. However, while system files are public, other people's files are not. *Respect the privacy of other users*.

This account is for your use *only*; it may not be given away or shared.

Getting Started

After you first log on, you might want to change your given, random password; and you might want to update your "finger"information. Be forewarned that **passwd** will check for and reject easily cracked passwords.

To change your password, type:	passwd
To change your "finger" information, type:	chfn
To logout, type:	logout

A few other Unix commands:

To check your finger information, type:	finger 112b-ak
To see manual page for ***command*****, type:**	man *command*
To list commands related to ***keyword*****, type:**	man -k *keyword*
To list a text file, type:	more
To read mail, type:	pine
To read news, type:	tin

Other commands (use man **to learn more):** ls, chmod, finger, w, mkdir, cd, mv, emacs, vi

....

Return this portion to your instructor.

Account name: 112b-ak

Getting Started

After you first log on, you might want to change your given, random password; and you might want to update your "finger"information. Be forewarned that **passwd** will check for and reject easily cracked passwords.

To change your password, type:	passwd
To change your "finger" information, type:	chfn
To logout, type:	logout

A few other Unix commands:

To check your finger information, type:	finger 112b-aw
To see manual page for ***command*****, type:**	man *command*
To list commands related to ***keyword*****, type:**	man -k *keyword*
To list a text file, type:	more
To read mail, type:	pine
To read news, type:	tin

Other commands (use man **to learn more):** ls, chmod, finger, w, mkdir, cd, mv, emacs, vi

....

Return this portion to your instructor.

UNIX Course Account Form for 112b

Department of Computer Science, Smith College, Northampton, Massachusetts 01063

Here is your Computer Science UNIX account. Your account name is: 112b-ax

Your password is: cDD"xc65

Read the material on "System Practices," sign the agreement below, tear it off along the dotted line, and return it to your instructor.

System Practices

Smith instructional computer systems are meant to be used for any and every educational purpose. There are no fixed limits on or charges for login time, use of the CPU (processor), or file storage space. Since some resources can be used up—printer paper, or access to terminals—we ask that you use these only as necessary. Help keep the systems unregulated—*don't waste or monopolize resources*. When file storage space runs out, pitch in to help make space available. Similarly, use your good judgement to minimize use of CPU-intensive programs when the system is heavily loaded. Use the system as much as you need to, but *let other people work too*.

Beowulf, grendel, and the other Computer Science machines are run as an open system. The UNIX philosophy is to leave as much of the computer open for inspection as possible. One of the best ways to learn what's available is to explore. Secrecy is not the standard on UNIX. However, while system files are public, other people's files are not. *Respect the privacy of other users*.

This account is for your use *only*; it may not be given away or shared.
